of Dr. Michael Laitman and Bnei Baruch*

## A Chance To Bring Light To The World

**Question:** Can we make a leap upwards at the upcoming Congress?

**Dr. Laitman's Answer:** Of course! Everything depends on us. Everything is already present in our souls, in the informational genes (*Reshimot*). This entire system is now starting to connect globally and all the Kabbalists of the past—all the souls that united together—are now coming to the surface.

It's not a coincidence that our world is becoming so global. It's happening because the common system of souls is now being revealed together with the connection between all the people in the whole world.

The events that are unfolding are not following linear laws, but are coming from the general, perfect system. Therefore, it isn't just a sequence of actions, but an operation of the entire system which is starting to be revived. Every part influences everything else and the whole process develops along a geometrical progression.

## It Doesn't Make Any Sense, But It Is Fascinating

**Question:** Why should we read about all the numerous details described by *The Zohar* if we aren't able to identify them inside us?

**Dr. Laitman's Answer:** We have to be like a child who looks at the world around him and doesn't understand anything, yet he gradually develops. He gets excited when he sees a bus passing by because it looks like something very big that's moving. There's another natural phenomenon where newborn geese take the first moving object they see to be their mother, and they follow it. This causes them to develop.

In the same way, when we are reading *The Zohar*, there is a part we don't understand at all yet, and another part that we can already connect to. This develops us. We have to realize that we aren't able to understand it yet, but one day we will surely understand everything in its entirety. When we desire and try to understand what we are hearing, we awaken the force that develops us. Otherwise, how else could we develop?

The more we advance, the more taste we will feel in the study.
